

We are working in your neighborhood creek!

Stevens Creek maintenance projects

The Santa Clara Valley Water District will conduct routine stream maintenance for fire and flood prevention in Stevens Creek from Crittenden Lane to La Avenida Avenue in Mountain View. This is a multi-phased project that will involve mowing, vegetation removal and sediment removal.

The water district will mow on both levees for fire prevention purposes and provide general clean up around the area. Mowing will start in late June and take approximately three days to complete.*

To maintain flow conditions in the creek and sustain a stable and healthy ecosystem, the water district will remove sediment from the creek channel. Sediment removal will start in late July and take approximately eight weeks to complete.*

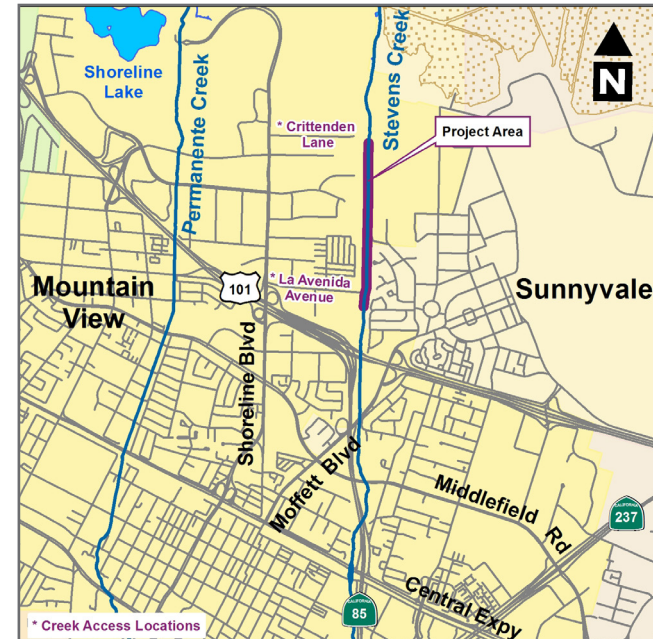

The water district will remove vegetation from the island in the creek channel to prevent flooding and to improve access to the lower maintenance road. Vegetation removal is anticipated to start between late August and early October and take approximately one week to complete.* Removing invasive plants will improve the creek habitat. This phase of the project will occur later this summer.*

The water district follows all regulations and Best Management Practices. Licensed qualified applicators will apply herbicides that are low in toxicity and not harmful to animals, humans or non-invasive plants.

A 12 person crew will work on the project using excavators, dump trucks, crew trucks, small loaders and heavy equipment. Expect typical construction noise during the work hours of 8 a.m. to 4 p.m., Monday through Friday. In the unlikely event of delays, work may include Saturdays.

Trucks and crews will access the creek from Crittenden Lane and La Avenida Avenue. The water district expects no trail or road closures although signs will be posted on the trails and flaggers may be on site for safety.

*Project start dates and duration may vary due to site conditions and equipment availability.
