Building now for a reliable future

Project Update

As part of the Santa Clara Valley Water District’s (Valley Water) commitment to ensure a safe, reliable water supply, the Main Avenue and Madrone Pipeline Restoration Project began construction in early February 2018. Last December, Valley Water finished construction along Cochrane Road from the Anderson Dam outfall, which included trenching, installation of pipes, backfilling of trenches and repaving the road. Construction and major road paving along Half Road is also complete. Crews may be observed on Half Road performing utility lid adjustments and work quality checks, but the impact will be minimal.

New Phase of construction is now underway

The project is currently in construction on a section of Cochrane Road and East Main Avenue from now through June 2019. Work hours will be from 7 a.m. to 5 p.m. Valley Water will implement temporary vehicular and pedestrian traffic control as needed to facilitate the safe construction of the project. Public access to residential and commercial properties will be maintained throughout this phase of construction, but anticipate minor traffic delays, pedestrian detours, intermittent road closures, noise, and other minor impacts. Please use caution when traveling through construction areas. When possible, Diana Ave, Peet Road, Mission View Drive, and Condit Road should be used to bypass construction on Cochrane and East Main Avenue.

About the Project

Morgan Hill residents get 100% of their drinking water from local groundwater sources. This project will install approximately 14,000 linear feet of raw water pipeline to meet current and future groundwater recharge demands in south Santa Clara County.

Installing the new pipeline system and related facilities will help ensure a safe, reliable water delivery system for Morgan Hill residents. The completed project will enable groundwater recharge from both local and imported raw water sources to the Main Avenue Ponds and the Madrone Channel Recharge facilities. Raw water is water from local sources like Anderson Reservoir, or imported sources like the Sacramento-San Joaquin Delta that has not been filtered nor treated. As water percolates into the groundwater basin, it is naturally filtered and usually needs little to no treatment once it is pumped back to the surface. As with all water resources, it is continually monitored and regularly tested as part of our commitment to delivering safe, clean water.

3 ways to get project updates

1. Visit https://delivr.com/2uwte

2. Use Access Valley Water, valleywater.org/avwapp, Valley Water’s customer request and information system, to request project information or to submit questions, complaints or compliments directly to a Valley Water staff person.

3. Sign up to receive Main Ave and Madrone Pipeline Project updates via the QR code or the sign up link on the project website.
