

Safe, Clean Water
and Natural Flood Protection

We are working in your
neighborhood creeks!

Adobe and Barron Creek Sediment Removal from Highway 101 to Middlefield and Louis Roads

Dedicated to protecting our communities from flooding, the Santa Clara Valley Water District works to reduce this risk through its Stream Maintenance Program. Among these efforts is the planned work in your neighborhood to remove sediment from Adobe Creek from Highway 101 to Middlefield Road and Barron Creek from Highway 101 to Louis Road in Palo Alto.

Removing sediment build-up within the creeks will restore channel capacity and maintain the creeks capacity to carry floodwaters while sustaining a stable and healthy creek ecosystem.

What to expect

The sediment removal work along Adobe Creek and Barron Creek is estimated to take approximately 35 work days to complete.* Work hours are from 8 a.m. to 4 p.m., Monday through Friday. In the unlikely event of delays, work may occur on Saturdays.

A five-person crew will work at Adobe and Barron creeks using excavators, bobcats, dump trucks, loaders, and a pumping system. A generator, designed to operate quietly, will be pumping water around the project site. Expect typical construction noise and dust from heavy equipment during work hours. A water truck will be used to control dust along the work area.

Trucks and crew will access Adobe Creek from West Bayshore Road, East Meadow Drive, and Middlefield Road. Barron Creek will be accessed from Louis Road, East Meadow Drive, and East Meadow Circle. Although no road closures are anticipated, expect traffic control when warranted for safety.

*Project start dates and duration may vary due to site conditions and equipment availability.
