Dear Neighbors,

Earlier this summer, you received a general notification about Valley Water's annual Stream Maintenance Program (SMP) work. As part of that effort, Valley Water would like to highlight the activities occurring along Thompson and Lower Silver Creeks between Tully Road and Quimby Road in San Jose. Crews are removing sediment buildup and debris that could potentially cause water to back up during heavy storms, which could increase the risk of flooding. This work ensures storm water will be able to flow through the creek as designed.

Work is expected to continue into the fall and will occur Monday through Friday between the hours of 8 a.m. and 5 p.m. While no trail closures are anticipated, trail users and residents can expect minor delays and typical construction impacts, such as noise and dust. Trail users should exercise caution as work occurs. Flaggers may be present to help safely direct trail users around construction activity as appropriate.

As a reminder for the safety of Valley Water staff and other trail users during the COVID-19 pandemic, please continue observing all public health recommendations, including the use of social distancing and face coverings.

Under our Stream Maintenance Program (SMP), Valley Water performs work annually from mid-June through mid-October to improve the environment and help ensure our streams with completed flood protection projects continue to reduce the risk of flooding for nearby homes and businesses. Each year, portions of these streams are inspected and prioritized for maintenance projects like this one. Valley Water owns and manages about 275 miles of stream out of the total 800 miles countywide. To learn more about the SMP program and other work planned throughout Santa Clara County, please visit [https://delivr.com/2gpuq](https://delivr.com/2gpuq).

The SMP is funded in part by the Safe, Clean Water and Natural Flood Protection Program (Safe, Clean Water Program), which is a countywide special parcel tax approved by the voters of Santa Clara County in November 2012. Detailed information about the Safe, Clean Water Program, including project and program descriptions, finances, implementation plans, and provisions for external oversight can be found at: [www.valleywater.org/safecleanwater](http://www.valleywater.org/safecleanwater).

Sincerely,

John L. Varela
Director, District 1
