

Sunshine Julian

Capital Engineering Manager

Sunshine has been with Valley Water since 1999 and has worked as an Associate Civil Engineer since 2007. She has a B.S. degree in Civil Engineering from San Jose State University, is a registered Professional Civil Engineer in California, and Project and Program Management Professional certified.

She is also a graduate of Valley Water's Emerging Leaders Certification Program and the Management Talent Exchange Program where she worked in the City of Cupertino.

Sunshine has worked in various functions at Valley Water including issuing permits for Community Projects Review Unit; working with the asset management program; and planning, design, and construction of water utility and watershed capital improvement projects.

As the Project Manager for the Upper Llagas Creek Flood Protection Project in the last nine years, Sunshine led her team to take this large project to construction – working with both the civil and regulatory branches of the U.S. Army Corps of Engineers and overseeing the planning, design and construction support. She has strong experience and understanding of the environmental review and permitting processes, and preparation of planning and design of Valley Water's capital improvement projects.
