Golf Creek Sediment Removal North of Camden Avenue

Through flood protection and infrastructure maintenance work, the Santa Clara Valley Water District continually invests in the community's safety. Among these efforts is the planned work in your neighborhood to remove sediment from Golf Creek downstream of Camden Avenue in San José.

Removing sediment that has built up within the creek will restore channel capacity, minimize sediment build-up in the future, and maintain the creek's capacity to carry floodwaters while sustaining a stable and healthy creek ecosystem.

What to expect

Work is anticipated to begin in mid-June and is estimated to take approximately six weeks to complete.* Work hours are from 8 a.m. to 4 p.m., Monday through Friday. In the unlikely event of delays, work hours may include Saturday.

A four-person crew will be working at the project site using an excavator, loader, ten-wheeler trucks, water trucks, and street sweepers. A generator, designed to operate quietly, may be pumping water around the project site. Expect typical construction noise and dust from heavy equipment during work hours.

Trucks and crews will access the site from Redmond Avenue, Culligan Boulevard and Camden Avenue. Although no trail or road closures are anticipated, expect traffic control when warranted for safety purposes.

*Project start dates and duration may vary due to site conditions and equipment availability.
