

We are working in your neighborhood creek!

Ross Creek upstream of Harwood Road Bank Protection

The Santa Clara Valley Water District is invested in our community's safety as we work to protect residents and businesses from flooding and maintain existing infrastructure. The water district will work in your neighborhood, repairing an eroded streambank site along Ross Creek upstream of Harwood Road in San José.

The project will repair approximately 205 feet of creek bank that has eroded during past winter storms and high water flow events. The banks will be reshaped and lined with rock to prevent future erosion and improve water quality in the stream. The repairs will also minimize sediment build-up and maintain the creek's capacity to carry floodwaters, while sustaining a stable and healthy ecosystem.

Bank protection will occur along Ross Creek, west of Harwood Road in San José.

- Bank Repair

What to expect

Work is anticipated to begin in late June and is estimated to take approximately six weeks to complete.* Work hours are from 8 a.m. to 4 p.m., Monday through Friday. In the unlikely event of delays, work hours may include Saturday.

A four-person crew will be working at the project site using an excavator, loader, ten-wheeler trucks, water trucks, and street sweepers. A generator, designed to operate quietly, may be pumping water around the project site. Expect typical construction noise and dust from heavy equipment during work hours.

Trucks and crews will access the site from Harwood Road. Expect no trail or road closures, but traffic control or flaggers may be needed at times during work for safety.

**Project start dates and duration may vary due to site conditions and equipment availability.*
